1. INTRODUCTION

The Public Procurement Act No. 8 of 2020 (PPA), was enacted to revise the law relating to procurement so as to enhance transparency, efficiency, effectiveness, economy, value for money, competition and accountability in public procurement; regulate and control practices relating to public procurement. The PPA was enacted primarily to promote the integrity, fairness and public confidence in, the procurement process; promote the participation of citizens in public procurement; continue the existence of the Zambia Public Procurement Authority (the Authority) or incidental to, the foregoing.

In accordance with Section 12 (3) of the PPA, the Authority is required to issue a quarterly Market Price Index (MPI) to be used by a controlling officer, chief executive officer and procuring entity for purposes of an informed price decision. Further, Section 12 (2) of the PPA provides that a procuring entity shall procure standard goods, services and works in accordance with the price index issued by the Authority. Additionally, procuring entities will use the MPI as a tool for budgeting, annual procurement planning, and bid/tender evaluation.

The Market Price Index is a metric that represents price position relative to competitors across key categories and brands, suppliers of goods, works and services. The MPI is a key component in the tender pricing strategy which looks at prices of commonly procured items, specification units of purchase, neutral specification of items or brand names, that are standardized items and procured by procuring entities in different categories described herein.

The frequency of production and release of the MPI is on a quarterly basis; intended to be made available to all stakeholders involved in the public procurement process and supply chain. This is necessary in order for the stakeholders to make informed decisions during their respective tendering and supply processes.

2. METHODOLOGY

The Zambia Statistics Agency (ZamStats) is responsible for the coordination of production and publication of official statistics in Zambia, in accordance with the Statistics Act No. 13 of 2018. The Authority and ZamStats entered into a Memorandum of Understanding (MOU) on 28th September, 2020 for purposes of collecting market price information. The MoU provides for exchanging of related information between the two institutions and for the publication of such data.

The market price information in this index was collected and analyzed by ZamStats. The Authority has collaborated with, and will continue to collaborate with ZamStats in the production of the MPI.

2.1 Data Analysis

The data processing phases included data entry, cleaning and analysis. The following variables were computed and employed during the data processing phases: namely, geometric mean, standard deviation, coefficient of variation and the count (i.e. number of quotations per item). The maximum and minimum prices for each item were also computed by province and at national level.

ZamStats used some of these variables in the MPI report as explained below:

The Geometric mean of prices was calculated by getting the product of their values and taking the n^{th} root of the product (as opposed to the arithmetic mean which uses the sum of their values divided by n) where n refers to the number of observations. The geometric mean represents the average price and was calculated for each item in each province from a minimum number of six price quotations. The 'National Average' price was also derived by calculating the geometric mean from the provincial average prices on each item.

The standard deviation is a measure of dispersion and was calculated to show how far data sets deviate from the group geometric mean.

The Coefficient of Variation (CV), is a measure of spread that describes the amount of variability relative to the mean and is calculated by dividing the standard deviation by the geometric mean and multiplying by 100.

The Count 'N' is the number of valid prices which is used to calculate the geometric mean.

2.2 Product Classification

The United Nations Standard Products and Services Code (UNSPSC)' international coding system was used to code all the items. The UNSPSC coding system enables buyers and sellers to describe goods and services in a common way without referring to any suppliers' in-house catalogue codes and descriptions. The UNSPSC framework adopts a four or five level classification, using the labels Segment, Family, Class, Commodity and Business Function. The Index further includes a general summary of items under the Consumer Price Index (CPI) which are in conformity to the Classification of Individual Consumption by Purpose (COICOP) coding system, as adopted from ZamStats.

This index has a total number of 1,025 items (591 items under the UNSPSC and 434 under the COICOP system).

2.3 Currency of MPI

The prices of the items collected are presented in the Zambian Kwacha, unless otherwise explicitly stated in the index. The exchange and inflation rates prevailing at the time of price collection were taken into consideration during the preparation of the MPI and CPI.

2.4 Limitations in the MPI

1. The COVID 19 pandemic delayed the accessibility to information as some outlets were not accessible during the time of the survey. In some instances it was not possible to obtain the average prices from the recommended number of outlets, at least six (6) price quotations

per item, which led to non-inclusion of the price in the MPI. This had minimal impact on the overall data.

2. For procurement of 'Works', the various civil works procured by procuring entities have not been presented in this MPI. However, for subsequent MPIs the Authority is acquiring a cost estimator software that will enable it to come up with build-up rates for various standard works in the construction industry.

3. APPLICATION OF THE MARKET PRICE INDEX

Procuring entities are advised to refer to the Average Prices from their respective provinces. However, where the price(s) for a particular item(s) are not provided for in the respective province, the National Average Prices may be used. Procuring entities are required to ensure that the range of prices for goods, works or services are **plus or minus five percent (±5%)** of the prices in the Market Price Index. The MPI shall be used during the following stages:

- (a) budgeting;
- (b) annual procurement planning; or
- (c) bid/tender evaluation.

The brand names included in the price index were mentioned as emphasis for most commonly procured goods and services in the public sector. Therefore, the stated brand names are not an exclusive recommendation or prescription by the Authority to procuring entities, but are merely mentioned for purposes of additional information in the market place.

Procuring entities are reminded to undertake price reasonableness analysis (subject to approval by the Authority) where an item to be procured is not covered in the quarterly MPI.

All procuring entities are reminded of the provisions of section 12 (5) of the PPA which provides that '...An office holder who willfully or negligently engages or is involved in a transaction in which standard goods, services and works are procured at an inflated price commits an offence...'

The Authority shall continuously review and update the MPI to ensure that goods, works or services that are commonly procured by procuring entities are covered in the subsequent MPIs.

4. SURVEY RESULTS

CATEGORY A: GOODS

UNSPSC-Code	Item Description	UOM	Central	C/B	Eastern	Luapula	Lusaka	Muchinga	Northern	N/W	Southern	Western	National Average
41112224	Infrared Thermometer (Thermogun)	Each	700	721	850	700	806	-	750	665	922	887	773

Notes

The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

Table 2: Office Supplies and Consumables

Notes

Prices of some of the ICT equipment vary based on the brand name, marketing strategies and on the generational release (version date) of the item. The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

Notes

The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

Notes

The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

Notes

The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

Notes

The dash (-) wherever it appears in the table in place of the real price means the price missing due to either one of the following reasons:

1. Number of quotations collected were less than 3 to determine an objective average price
2. Product was unavailable at the time of data collection
3. Outlets were not found/outlets were not accessible at the time of data collection

CATEGORY D: INTERNATIONAL TRADE MPIs

Note: Once the International MPIs for Goods, services and works have been collected and compiled, they will be disseminated for use by Pes. This shall be done in conjunction with the Zambia Revenue Authority and ZamStats.

CATEGORY E: GENERAL SUMMARY

This section, general summary, comprises of items with prices as collected by ZamStats for purposes of the Consumer Price Index (CPI). For purposes of the MPI, the average national prices presented may be used to provide informed price decisions. The products are coded in conformity to the Classification of Individual Consumption by Purpose (COICOP) system. Additional products as indicated in the CPI may be accessed from the ZamStats website (<https://www.zamstats.gov.zm/>). The average prices in this section are as collected from the different provinces as at September, 2021.

Note: The Authority is cognizant that the items in the CPI using the COICOP system may have additional items from those in the MPI and are equally commonly procured by procuring entities. Procuring entities shall use the table below for price benchmarking purposes.

TABLE 56 - SUMMARY FOR ALL PRODUCTS USING CLASSIFICATION OF INDIVIDUAL CONSUMPTION BY PURPOSE (COICOP) CODING SYSTEM-SEPTEMBER, 2021

S/N	Product Code	Description	National Average
1.	011111	Breakfast Mealie Meal	139.40
